

SUNDAR ANBU

AI Engineer | LLM Applications & Agents (RAG, LangChain, LangGraph, MCP) | Full Stack Engineer (MERN)

+91 63835 22927 | sundaranbu007@gmail.com | Bangalore, KA, India
linkedin.com/in/sundaranbu | sundaranbu.com | github.com/sundaranbu

PROFESSIONAL SUMMARY

AI Engineer and Full Stack Developer with 5+ years of experience shipping production software, now focused on LLM-powered applications and agentic systems. Hands-on with Retrieval-Augmented Generation (RAG), LangChain, LangGraph, LangSmith, Model Context Protocol (MCP), embeddings and vector search (pgvector), prompt engineering and LLM evaluation. Strong engineering foundation across Python, TypeScript, React.js, Node.js, PostgreSQL and MongoDB, with multi-cloud delivery on AWS, Azure and GCP and DevOps in Docker, Kubernetes and CI/CD. Proven record of customer-facing, end-to-end ownership — discovery, solution architecture, system and API integration, secure authentication, production deployment and incident resolution — for U.S. healthtech, fintech and edtech clients.

CORE COMPETENCIES

AI Engineering | LLM Application Development | Retrieval-Augmented Generation (RAG) | Agentic Workflows & Orchestration | Prompt Engineering | Embeddings & Semantic Search | LLM Evaluation & Observability | AI System Design | Solution Architecture | API & System Integration | Forward Deployed / Solutions Engineering | Stakeholder Management | End-to-End Delivery

TECHNICAL SKILLS

AI & GenAI: LLM / AI API Integrations (Anthropic Claude, OpenAI, Hugging Face, Ollama), Retrieval-Augmented Generation (RAG), GraphRAG, LangChain, LangGraph, LangSmith, Model Context Protocol (MCP), AI Agents & Tool Calling, Prompt Engineering, Embeddings & Semantic Search, Chunking & Retrieval Strategies, Vector Databases (pgvector), LLM Tracing, Evaluation & Guardrails, Fine-Tuning (LoRA / open-weight models), NLP Chatbot Integration

Languages: Python, JavaScript (ES6+), TypeScript, SQL

Frontend: React.js, Next.js, Redux, Redux Toolkit, AngularJS, TailwindCSS, HTML5, CSS3, Bootstrap

Backend: Node.js, Express.js, FastAPI, REST APIs, GraphQL, WebSockets, Microservices, Serverless, Authentication & Authorization (OAuth2, SSO, JWT, RBAC)

Databases: PostgreSQL (pgvector), MongoDB, MySQL, Oracle, Redis, Firebase Firestore

Cloud & DevOps: AWS (EC2, S3, Lambda, App Runner, CloudWatch, IAM), Azure (App Service, Functions, Key Vault, DevOps, Blob Storage), GCP (Cloud Run, App Engine, Firebase, Cloud Storage, IAM), Docker, Kubernetes, GitHub Actions, CI/CD

Architecture & System Design: AI/LLM Application Architecture, Solution Architecture, System Design, Microservices, Event-Driven Architecture, Serverless, Multi-Tenant SaaS, API Design, Data Modeling & Schema Design, Caching & Performance Strategy, High Availability & Scalability, Security Architecture (SSO, OAuth2, RBAC, Secrets Management), Monitoring & Observability

Practices & Tools: Agile / Scrum, Jira, Git, Technical Documentation, Root Cause Analysis, Incident Resolution, Jest, Mocha, Chai, Postman, Pytest

PROFESSIONAL EXPERIENCE

Full Stack Engineer | Wadhvani Foundation, Bangalore (Remote)

May 2026 – Present

National Education Platform (NEP) / Wadhvani Entrepreneur Institute (WEI)

- Designed a cross-product AI support assistant — a single multi-tenant conversational layer serving every platform in the portfolio, using each product's documentation as a retrieval knowledge base, capturing feature-gap signals across products, and auto-creating and routing Jira tickets end-to-end; scoped and pitched the architecture to engineering leadership.
- Built an LLM-assisted localisation pipeline for a ~2,900-string, 188 KB locale catalogue, generating Bangla, Marathi and Gujarati translations with strict key-structure parity and country-scoped taxonomies, eliminating English fallbacks across the skilling platform.
- Engineered a Firebase-based SSO handover to a partner LMS, issuing short-lived single-use ID tokens with replay protection and claim-based user matching, and extended it with Microsoft sign-in on the WordPress-hosted knowledge portal.
- Led the frontend workstream of a VAPT security remediation programme — V2 login and social-login APIs, blind XSS, CSP and security headers, insecure direct object references, user-settings API hardening and socket exposure — coordinating with the partner backend team to unblock deployment.
- Led a Moodle LMS integration with an external vendor team, owning cross-functional collaboration, secure secrets management via Azure Key Vault, and repository and environment setup through to production.
- Diagnosed and resolved a live PostgreSQL production migration incident across five core tables, restoring service with a backward-compatible fix; drove delivery through Jira across platform and admin workstreams using React.js, Next.js, Node.js and PostgreSQL on GCP and AWS.

Senior Consultant / Solutions Architect (Freelance) | IgniteNext.org, Virginia, USA (Remote)

Jan 2026 – Apr 2026

- Engaged as lead consultant and then architect for a U.S. non-profit, owning the solution end to end — requirements discovery, architecture, build and production rollout.

- Designed and provisioned the complete AWS environment from scratch — networking, compute, storage, IAM and deployment pipeline — as the foundation for the platform.
- Built the application itself: a platform enabling students to apply for education credits and receive credit support, covering application workflows, eligibility handling and administrative review.

Senior Engineer | Wyzard.ai, Gurugram (Remote)

Jul 2025 – Mar 2026

Client: Blooming Health (maryland.gbloominghealth.com) — U.S. HealthTech

- Served as the customer-facing engineer for a U.S. healthtech client, building and deploying a Resource Directory on React.js, Node.js, Express.js and MongoDB for discovering health and wellness resources across Maryland.
- Designed scalable RESTful APIs and MongoDB data models powering resource categorisation, search and filtering, owning delivery from requirements through production deployment.
- Built AI-assisted workflow features and user-facing dashboards for Wyzard AI's core product on the MERN stack and Node.js microservices, translating product requirements into shipped features.
- Implemented CI/CD pipelines with GitHub Actions and Docker, reducing release turnaround by 35% and delivering iterative releases on schedule in an Agile/Scrum environment.

Full-Stack Developer | ContiInex, Bangalore

Feb 2025 – Jul 2025

- Owned solution architecture and end-to-end delivery of backend modernisation, migrating legacy systems to Node.js, Sequelize and PostgreSQL and reducing database costs by 50% through query optimisation and indexing.
- Improved REST API response times by 40% via advanced indexing, Redis caching and database load reduction, boosting throughput for high-traffic production workloads.
- Architected scalable microservices with Docker, Kubernetes and GCP Cloud Run for high availability under peak load.

Full-Stack Developer | Ken42, Bangalore

Sep 2022 – Feb 2025

- Led a cross-functional team of 5 engineers to deliver a NASSCOM-funded EdTech platform serving 100,000+ users, owning technical design and implementation with React.js, Redux, Node.js, Express.js and MongoDB.
- Designed and built an end-to-end investor management portal with role-based access control and Firebase Authentication-based SSO, enabling real-time data tracking and reporting.
- Integrated third-party APIs and secure auth flows for platform-wide user management; engineered modular React and Redux components, cutting page load time by 35%.
- Automated cloud deployments with GitHub Actions, GCP Cloud Run and Docker, cutting release cycles and manual intervention by 60% and monthly infrastructure costs by 30%.

Software Developer | SmarTek21, Pune

Mar 2022 – Aug 2022

- Delivered a HIPAA-compliant patient management system for a U.S. healthcare client using Node.js, Express.js, React.js and PostgreSQL, partnering with the client on secure data workflows and regulatory compliance.
- Integrated NLP/AI chatbot APIs to automate patient interaction workflows, reducing manual support load by 25%, and built real-time dashboards for patient data and operational KPIs.

Junior Software Engineer (Intern → Full-Time) | Tenr Inventure (P) Ltd, Bangalore

Feb 2021 – Feb 2022

- Promoted from intern to full-time within 6 months; built and optimised Salesforce data pipelines and system integrations with Node.js and MySQL, and strengthened data integrity with schema validations and audit trails in Express.js applications.

AI PROJECTS

Model Context Protocol (MCP) Server & Client | Python

- Built an MCP server exposing tools and resources to LLM clients, with a companion Python client, covering the full protocol lifecycle — tool registration, schema definition, transport and structured tool-call handling.

Grounded Document QA — RAG Pipeline | Python, Embeddings, Vector Search

- Implemented every stage of a RAG pipeline over a heterogeneous document set (HR policy, product FAQ, API reference): ingestion, chunking, embedding, vector retrieval and grounded generation, with explicit refusal when the context does not support an answer.

GraphRAG + LangGraph Research Agent | LangGraph, LangChain, LangSmith

- Stateful multi-step agent combining graph-based retrieval with vector search over a domain corpus, orchestrated as a LangGraph state machine with tool nodes, conditional routing and LangSmith tracing for step-level evaluation and debugging.

Script-to-Video Generation Agent | Agentic Pipeline, TTS, Media Automation

- End-to-end agent that turns a written script into a narrated one-minute video, orchestrating scene planning, voiceover synthesis, visual selection, captions and final render in one automated pipeline.

EDUCATION

Bachelor of Computer Applications (BCA) — Alagappa University, Hosur

Aug 2019 – May 2022

Diploma in Information Technology — NTTF, Bangalore

Jun 2018 – May 2021
